Experience

AARP Services Inc. — Senior Data Engineer

Jan 2024 – Present

- Led AWS S3 lifecycle automation for millions of objects, cutting storage spend by over $300K annually.
- Optimized Databricks cluster scheduling and governance, saving $150K/year in compute costs.
- Managed contractor team, budgets, and SOW approvals, delivering ~$500K in annual savings on schedule.

Handshake AI — Software Engineer / Reviewer, Project Helix

Dec 2025 – Present

- Promoted to **Reviewer** (top 80 of 6,000 contributors) for a 6-month term, auditing peer submissions for correctness, code quality, and benchmark integrity.
- Designed golden-solution test cases and adversarial engineering challenges used to benchmark and evaluate LLM code-generation performance.
- Developed reference implementations in Python, C++, and SQL that current frontier models consistently fail, directly informing model improvement.
- Authored production-style coding tasks replicating real-world terminal and developer workflows for agentic model training.
- Evaluated agentic LLM performance through blind, head-to-head model task comparisons to surface capability gaps.
- Performed pairwise preference ranking of competing model responses across STEM and software-engineering domains.
- Reviewed and scored model responses spanning multiple coding domains to calibrate reward signals and model behavior.

Mercor — SWE / Data Scientist / System Design Expert

May 2026 – Present

- Delivered expert-level data science annotations, model evaluations, and prompt-engineering assessments across ML, statistics, and Python workflows.
- Served as a P1 Writer and Generalist Expert, authoring high-quality software-engineering and system-design problems and reference solutions.

Snorkel AI — Code Annotation Expert

Mar 2026

- Performed prompt-rating and quality assessment tasks for code-focused datasets used to fine-tune and evaluate LLMs.

xAI — AI Model Evaluator

Jan 2026

- Conducted multi-turn prompt rating and trajectory analysis to assess conversational model performance and long-horizon reasoning.

AARP — Data Engineer

Aug 2022 – Jan 2024

- Designed scalable databases and data lakes, improving enterprise data processing efficiency by 43%.
- Built Python/Databricks ETL pipelines and AWS Lambda automation, reducing runtime by 32% and manual intervention by 85%.

Corfix Project — Software Engineer

Oct 2021 – Apr 2022

- Developed interactive heart-model visualizations with vtk.js, WebGL, and Python for patient-specific septal-defect treatment planning.
- Built modules for 3D-printed cardiac conduits and PySpark medical-data workflows, improving treatment personalization.

Projects

Slicer Connectomics Toolkit — *Python, VTK, ITK, scikit-image* (2026)

- Built an end-to-end neuron segmentation pipeline for electron microscopy volumes: custom 3D Slicer extension with GUI, CLI batch processing, VTK mesh export, atlas registration, and Jupyter morphology analysis notebooks.

Blender Portfolio — *Python, Blender 4, Cycles, GitHub Actions* (2026)

- Programmed 8 fully procedural 3D scenes entirely in Python—zero manual modeling—with a reusable geometry/materials/lighting/rendering utility library and CI-driven automated render validation.

Songsterr Enhanced Search — *React, Vite, TypeScript, FastAPI, SQLite* (2026)

- Full-stack app that enriches Songsterr guitar-tab search with Spotify popularity sorting, genre filtering, and SQLite caching via a Python FastAPI backend and React/Tailwind frontend.

Portfolio Website — *Next.js, React Three Fiber, Framer Motion, Tailwind* (2026)

- Launched kevindruciak.com—a personal portfolio with interactive WebGL 3D scenes, smooth page transitions, and responsive design deployed on Vercel.

Graphics Suite — *C++, OpenGL, GLSL* (2020 – 2023)

- Four-project JHU computer graphics series: path-tracing ray tracer, real-time renderer, skeletal animation system, and image-processing pipeline with convolution, edge detection, and HDR tone mapping.

Voxel Engine — *C++, OpenGL* (2020)

- Real-time voxel world engine with procedural terrain generation, chunk-based meshing, and frustum culling.

Education

Georgia Institute of Technology Master of Science (M.S.) • Computer Science (AI/ML Focus)

Johns Hopkins University Bachelor of Science (B.S.) • Computer Science

Skills

- **Languages:** Python • TypeScript / JavaScript • SQL • C++ • C • Java • GLSL • Bash / Shell
- **Frameworks & Tools:** React • Next.js • Vite • Tailwind CSS • Framer Motion • React Three Fiber / Three.js • FastAPI • PySpark • Databricks • Blender (bpy) • 3D Slicer • VTK • ITK • OpenGL • WebGL • scikit-image • Jupyter
- **Infrastructure:** AWS (S3, EC2, Lambda, RDS) • SQLite • GitHub Actions / CI/CD • Vercel • Git • Docker

Honors & Awards

ASI Hero — AARP • Mar 2026 Merit-based award for reducing a recurring feature-selection pipeline from 72 hours to 20 minutes and cutting per-run costs from $2,000–$5,000 to ~$5.
